Glasgow, UK • Right to Work in UK • Full UK Driving Licence

Professional Summary

Third-year Software Engineering student at the University of Strathclyde with experience developing Java and Python applications, contributing to award-winning hackathon projects, and building software both independently and in collaborative team environments. Strong foundation in object-oriented programming, Git-based development and problem-solving, with an interest in backend development and modern software engineering.

Education

University of Strathclyde Glasgow, Scotland • 2024 – 2029 (Expected)
BSc (Hons) Software Engineering
Year 1: Merit • Year 2: Distinction

Glasgow Clyde College Glasgow, Scotland • 2022 – 2024
Computing (Level 6) • Aug 2022 – June 2023 • Graded Test – A
HNC Software Engineering with Emerging Technologies • Aug 2023 – June 2024 • Graded Test – A

Projects

MindBridge May 2026
Developed an AI-assisted mental health platform as part of a five-person team at Claude Builder Club Northumbria, earning 2nd Place and the Ethics Award.
Collaborated on feature design and project direction.
Rapidly prototyped application features using Claude Code.
Reviewed and refined AI-generated code to improve reliability and functionality.
Served as the primary presenter during the final demonstration, explaining the project to judges and answering questions.
Technologies: React, TypeScript, FastAPI, Supabase, Claude API

Cryptogram Solver March 2026
Developed a Java application that teaches classical cryptography through interactive gameplay, with separate letter-based and numerical game modes.
Applied object-oriented design principles.
Implemented multiple classical encryption algorithms.
Used Git for version control.
Technologies: Java, Git.

Python RPG Manager July 2026
Developed a turn-based CRUD application in Python within one week, demonstrating file management and game handling.
Designed modular gameplay systems.
Implemented persistent save functionality.
Structured application using reusable components.
Technologies: Python, Git.

Generation Book Overhaul Jan 2026
Developed a Minecraft Forge mod that modifies Minecraft's book generation and behaviour using Java and Gradle.
Integrated with Minecraft Forge APIs.
Used Gradle for dependency management and builds.
Designed configurable gameplay mechanics.
Technologies: Java, Gradle.

Technical Skills

Languages Java • Python • Haskell • SQL
Tools Git • GitHub • GitLab • PostgreSQL • Gradle • IntelliJ IDEA • VS Code
Concepts OOP • Functional Programming • Database Design • Collaborative Development • Version Control

Interests

Strength training • Indoor bouldering • Video editing (Adobe Premiere Pro) • Learning Japanese

Languages

English – Fluent • Russian – Native • Ukrainian – Native
