Glasgow, UK • Right to Work in UK • Full UK Driving Licence

## Professional Summary

Third-year Software Engineering student at the University of Strathclyde with experience architecting and developing **full-stack applications**, **AI-powered software**, and **Java** applications in independent and collaborative environments. Strong foundation in **object-oriented programming, relational databases, REST APIs, software design, testing, and version control**, with practical experience using **React, TypeScript, FastAPI, PostgreSQL, Docker, GitHub Actions, Python and Java**.

## Education

**University of Strathclyde** — **Glasgow, Scotland**
*BSc (Hons) Software Engineering* — 2024 – 2029 (Expected)
• Year 1: Merit • Year 2: Distinction — *Mandatory 12-month industrial placement*

## Projects

### Mealtrack – Meal Planning & Inventory Platform — October 2026

- **Architected and developed** a full-stack meal planning and inventory platform using **Python, FastAPI, React, TypeScript, and PostgreSQL**, providing a unified system for managing meals, ingredients, supermarket products, and household inventory.
- **Designed a relational data model and REST API** connecting meals, ingredients, products, and inventory, implementing **ingredient matching, unit conversion, shortage detection**, and integrations with **Morrisons, Tesco, and Sainsbury's**.
- **Implemented automated backend and frontend testing** using **pytest, Vitest, and React Testing Library**, with API documentation provided through **OpenAPI/Swagger UI**.
- **Containerised and deployed** the application using **Docker Compose, PostgreSQL, nginx**, and configured **GitHub Actions CI** for automated backend tests, frontend tests, and production builds.

### Anthropic Claude Hackathon – 2nd Place & Loving Grace Ethics Award — May 2026

- **Developed MindBridge**, an AI-powered mental health companion, as part of a **five-person team** during a 48-hour hackathon, building a full-stack application with **Python, FastAPI, React, TypeScript, Tailwind CSS, Supabase, and the Anthropic Claude API**.
- **Designed and implemented** features for daily mood, sleep, and energy tracking alongside an **AI journalling agent** that structures and summarises patient entries, providing psychologists with concise, session-ready client insights.
- Served as the **main presenter and pitch lead**, presenting the solution to judges and investors, answering technical questions, and contributing to the project's **2nd Place finish and Loving Grace Ethics Award**.

### Cryptogram Solver — March 2026

- **Designed and developed** a Java application that teaches classical cryptography through interactive gameplay, supporting separate letter-based and numerical game modes.
- **Implemented multiple classical encryption algorithms** using object-oriented design and modular application components, with **Git** used for version control.

## Technical Skills

**Languages:** Java | Python | C | JavaScript | TypeScript | Haskell | SQL

**Web & Application Development:** React | FastAPI | HTML5 | CSS3 | REST APIs

**Software Engineering:** OOP | Data Structures | Sorting & Search Algorithms | Software Design | Debugging | Unit Testing

**Databases:** PostgreSQL | MySQL | SQLite | Relational Database Design | Normalisation

**Development Tools:** Git | GitHub | GitLab | Docker | GitHub Actions | Gradle | VS Code | IntelliJ IDEA | Postman

**Development Practices:** CI/CD | Branch Management | Merge Conflict Resolution | Agile Development | Collaborative Development

**Systems & Infrastructure:** Linux | Windows | Unix Shell | nginx | Computer Architecture | Web Server Configuration

## Languages

English – Fluent • Russian – Native • Ukrainian – Native

## Interests

Outside of computing, I enjoy strength training and indoor bouldering, as well as video editing using Adobe Premiere Pro. I am also currently learning Japanese.
